Introduction - 1

• Depopulation needs to be contextualized for making sense as an explanatory factor in rural Greece and across rural Europe.

• ‘Rural areas’ - and therefore ‘rurality’ - are scientifically and administratively (re)constructed at various spatial levels, involving population data.

• The challenge of depicting and explaining depopulation trends in rural areas reflects on socioeconomic criteria and policy concerns related to the sustainable future of rural Europe.
• It is important to illustrate the various aspects of depopulation in relation to the socioeconomic changes in rural areas.

• Moreover, depopulation is disaggregated into analysing specific age and socioeconomic groups, while also productive activities need to be taken into consideration.

• This paper aims at illustrating the challenges attached to interpreting depopulation and linking together the various socioeconomic processes in rural Greece.

Policy recommendations

• Depopulation in rural areas is related to specific socioeconomic processes (e.g. deagriculturalisation and ageing in rural areas) and needs to be related to existing policy frameworks (CAP, rural development, regional policy, etc.).

• Depopulation has spatial aspects which need to be incorporated into thematic policies. Moreover, depopulation is highly related to the study of (international and internal) migration movements.

• Mitigating depopulation could well be included into social policies to the extent it articulates numerous aspects involving disadvantaged/marginalised social groups.
