

Job ID: HEPHY125PD220

The Institute of High Energy Physics ([HEPHY](#)) of the Austrian Academy of Sciences ([OeAW](#)), Austria's leading non-university institution for science and research, performs a rich experimental particle physics program participating in accelerator and non-accelerator based experiments. The institute has major involvements in CMS at CERN, the Belle II experiment at KEK and several Dark Matter discovery experiments. An active theory group completes the research profile of the institute. Now HEPHY is offering a position as

POSTDOC POSITION (F*M) for Physics Analysis with the CMS experiment

(full-time, 40 hours per week)

HEPHY is one of the founding members of the CMS Collaboration. We have been strongly involved in the design, construction and operation of two of the major components of the experiment: the trigger system and the tracking detector. Our experience in building silicon detectors, the construction of FPGA based hardware and development of the appropriate firmware allow us to play a leading role within the collaboration. HEPHY is contributing to the high-luminosity upgrade plans for two major components of CMS: the silicon tracker and the high granularity calorimeter. HEPHY has contributed to CMS physics results since the beginning of LHC operation. One of our priorities is the measurement of properties of the top quark, where we currently focus on precision measurements of top quark pair production in association with vector bosons. HEPHY groups are also working on direct searches for supersymmetry and the dark sector, searches using displaced leptons, and on measurements of quarkonium production. Several members of the institute have been entrusted with positions in the CMS physics management.

Main tasks:

- strengthening of our analysis activities with the CMS experiment, in particular, taking a key role in the area of physics of the top quark
- interpretation of results in the context of SM effective field theory
- data analysis, including the improvement of existing and the development of novel analysis strategies
- supervision of students
- contributions to maintenance and development of the reconstruction and the calibration of physics objects

Requirements:

- PhD in the field of experimental particle physics
- an excellent research record and experience in performing analyses in a large international collaboration
- interest in part-time contributions to detector development is welcome but not a strict requirement
- good communication skills
- ability to work well in a team environment

We offer:

- interesting and diversified activities in a motivated team of physicists who cover a wide range of expertise from detector design and construction to theoretical physics
- being member of a large international collaboration, including participation in working meetings and conferences and interactions with other CMS teams
- a full-time employment, with an annual gross salary of € 54.453,00 according to the salary scheme of the Austrian Science Fund ([FWF](#))
- The position will be located in Vienna and opened for a period of four years

Please submit your application including a CV, a statement of research interests, a list of publications and two recommendation letters via e-mail to hephy-office@oeaw.ac.at (mentioning Job ID: HEPHY125PD220) **no later than January 10, 2021**.

For further information, please contact **Robert SCHÖFBECK** robert.schoefbeck@cern.ch.

The Austrian Academy of Sciences (OeAW) pursues a non-discriminatory employment policy and values equal opportunities, as well as diversity. The OeAW lays special emphasis on increasing the number of women in senior and in academic positions. Given equal qualifications, preference will be given to female applicants.
